DANIEL PIENDA

SISTEMS ENGINEER

ABOUT ME

Passionate and versatile Systems Engineering student with strong skills in full-stack web and mobile development. I specialize in building scalable and user-focused applications using technologies like TypeScript, Next.js, NestJS, and PostgreSQL. I enjoy turning ideas into real products that improve people's lives.

PROJECTS

E-COMMERCE

- Built with Next.js, this app offers product browsing, secure checkout, and multiple payment options (Cash, PayPal, Stripe). Includes protected admin access and authentication flow requiring login or registration before purchase.

BLOGS

- Developed using NestJS, featuring modular architecture, JWT and Google OAuth authentication, post and media management, and full Swagger documentation. Designed for scalability with multi-environment support, robust validation, and comprehensive testing.

AIRLINE

- I've developed a full-stack airline booking app with a Java Spring Boot backend and a React SPA frontend, featuring REST APIs, MySQL/PostgreSQL persistence, and secure JWT-based authentication with roles (Customer, Admin, Pilot). The app supports flight search, seat selection, and booking management with scalable architecture.

EDUCATION

Canadian School

2022 - Current EIA University

8 semester

HABILIDADES

Full-Stack Web

TypeScript / JavaScript

NestJS / Spring Boot

Authentication (NextAuth, Auth0, Passport.js)

React / Next.js

Python / Django

PostgreSQL / Prisma ORM

Supabase

RESTful API Design

Payment Integration

LANGUAGES

Spanish

English
